

## ▶ **Happy New Year!**

At the start of 2006, we would like to wish all of our customers a prosperous new year!

At Net Energy Internet, we have a number of exciting projects we're working hard to complete by the end of the year. Starting in January, we will shortly be bringing online new .NET 2 and PHP services as well as various upgrades to our existing services.

We also look forward to the launch of the new .eu domain name extension and will be accepting case by case applications for the second sunrise period starting on the 7th of February.

Please continue reading for our latest news, or if you would like to change your subscription details, please log into the control panel at [www.netenergy.net/login/](http://www.netenergy.net/login/) and select 'Newsletter Preferences' from the menu.

## ▶ **1.6 Million E-mails**

Following the success of our AVAS (Anti-Virus/Anti-Spam) service, we are delighted to report an increase in the number of e-mails that are now being scanned on behalf of customers.

During December 2005, AVAS scanned over 1.6 million e-mails for spam and virus content. Using personalised AVAS rules, spam messages are able to be automatically rejected so that only genuine e-mails are delivered to customers' inboxes.

For more information about AVAS, or for help setting up your own personalised spam rules, please visit the AVAS section on our website at [www.netenergy.net](http://www.netenergy.net).

---

## ▶ **.EU Launch Progress**

It's now less than 75 days to the land rush launch of the new European domain name extension, .eu.

Between now and the 7th of April, companies across Europe will be planning whether or not to apply for domain names using the new extension. Available to everyone, .eu registrations will be available for use by individuals, companies, charities, governments and other organisations.

.eu is predicted to be popular with residents of all countries in Europe and will be used as a geographical symbol of both location and trading territory.

At Net Energy Internet, we will be able to accept registrations for .eu domain names on our website from the beginning of April and will submit all applications to the registry for the 7th of April land rush launch.

If you are interested in applying for a .eu domain name during the sunrise phase 2 period (where additional paperwork and proof of eligibility are required), please contact us by e-mailing [sales@netenergy.net](mailto:sales@netenergy.net), with ".eu sunrise application" in the subject line.

For any additional information on .eu domain names, please contact [sales@netenergy.net](mailto:sales@netenergy.net).
